Custom fields in the new email builder

When using the new email builder within email broadcasts, you can now merge in custom fields from the contact record to better customize your email messages.

File upload & download in the new email builder

When using the new email builder within email broadcasts, you can now attach specific file types using the File block allowing your contacts to access hosted files and docs. [Learn more](#)

Bug fixes

- When using certain filters to create a contact Group, the new Group wouldn't save.
- Users assigned to Staff, Manager, and Limited Admin user roles were shown the remove link for a file inside a contact, but saw an error message when trying to delete the file.
