Campaign merge fields in advanced automations

Campaign merge fields allow you to easily edit information in one place. For example, if you have an advanced automation with multiple emails referencing an event date, you can edit the campaign merge field with the date one time instead of editing each individual email. [Learn more](#)

Pre-fill a public form from an email

Now when you include a link to a Public Form in an email, your contact's information will be added to the Public Form saving them time when filling out the form's fields.

Bug fixes

- Previously Pro and Max users were only able to right click on contacts for additional options but not on companies. Now they can also right click on Company records for more flexibility with working in the CRM.
 - If you viewed a filtered list of contacts and clicked to view one of the contacts in the list, all of your contacts would appear in the list instead of just showing the filtered list.
-
